# Coordinated Patient Management in the Genetic Era by Practitioners and Fertility Centers

April 12–13, 2018  
Cultural Center LAC – Lugano

## The aim of the 2<sup>nd</sup> Lugano Advances Training in Reproductive Medicine is to enlighten participants on innovations that affect how we handle oocytes, embryos and the uterus.

The purposeful workshop will explore the latest development in female and male infertility with a special focus on the latest advances in genetics applied to reproduction.

Undeniably, genetics stand today in the limelight of all discussions regarding fertility and assisted reproduction. Hence, we need to reconsider how we care for infertile couples taking into account the innovations offered by genetics research and its applications.

A panel of notorious experts will review various important topics in this field during the two-day workshop. Furthermore, Professor Simon Fischel, a renowned physiologist and biochemist, who worked alongside Robert Edwards and Patrick Steptoe, will give a lecture to honour the 40<sup>th</sup> anniversary of successful IVF with the birth of Louise Brown on 25<sup>th</sup> July 1978.

We look forward to welcoming you to our 2<sup>nd</sup> workshop: 'Coordinated Patient Management in the Genetic Era by Practitioners and Fertility Centers', which will be held at the Cultural Center LAC in Lugano on 12–13 April 2018.
